

Saving energy is easy as pie With two new features for Victory's Value Line Pizza Tables

Now! Operators can cool their pizza table's pan rail and food zone independently to ensure energy efficient operation with Victory's new individual temperature controls. This latest enhancement to the pizza table provides a dedicated thermostat for each section, to maintain the desired temperature for each area and to ensure optimal operation for each section.

The raised pan rail system is designed to comply with NSF 7 requirements, and with a new night switch feature conveniently located on the grill, operators can turn off the pan rail when it's not in use, saving energy and making cleaning easier than ever.

When it comes to innovative solutions for energy efficiency, there is no substitute for Victory.
